2. SimplyBoard¹ Product Summary

Contact centers serve 24 hours in a day, 365 days in a year to its customers. Operations are open to many external factors affecting the productivity of the call center during 24-hour daily operations. Product faults, service outages, recently announced campaigns or any degradation of call center resources (IVR, CTI, CRM, etc.) may result in unexpected increase in call volume causing sudden degradation of the Service Level within certain or whole operations.

Monitoring systems are the most important integral part of call centers and help team leaders, supervisors and managers to sustain service levels and manage shifts, while meeting the business requirements of the contact center throughout the day. However, during the breaks, shift changes, or any unexpected business meetings outside the contact center forces managers to loose their immediate control on the operations.

SimplyBoard™ is a real-time mobile monitoring tool which enables managers, supervisors or even team leaders to monitor their Contact Center operations by locations and skills without any interruption while they are away from their desks.

SimplyBoard™ management tool enables managers, supervisors or team leaders to monitor the operations under their responsibility eliminating the risk of delegating during their absence. You can define user groups and privileges per ACD location and Skill basis. You can add as many locations, skills or supervisors as you have.
